

COP2073C Programming Assignment 4

Instructions

- Create an R script which reproduces steps 1-10 in "Section 7.3 - ADDING POINTS, LINES, AND TEXT TO AN EXISTING PLOT" of your textbook to generate the plot shown in Figure 7.6: "An elaborate final plot of some hypothetical data."
 - NOTE: Steps 1-10 appear below Figure 7.6 in the textbook
- Here are those vectors used in the textbook for the problem for your convenience:

```
x <- 1:20  
y <- c(-1.49, 3.37, 2.59, -2.78, -3.94, -0.92, 6.43, 8.51, 3.41, -8.23,  
      -12.01, -6.58, 2.87, 14.12, 9.63, -4.58, -14.78, -11.67, 1.17, 15.62)
```

- Your plot will probably not look exactly like the one in the figure. One change I made to get it closer in appearance and make it more readable was to apply an overall **cex** scaling value of 0.5 to the legend.
- Right-click on the plot and Save As or use the Export button in the plot pane to save a .png image file of your plot.
- Submit both your R script and your image file to the GitHub Classroom repo.
- Remember to provide a 4-line ID header, comment your code (but do not over-comment), and keep your statements ≤ 80 columns.
